

IT outsourcing: views from UK

Eric Deeben

International Programme Lead

31 January 2023

What is the main objective of a National Statistical Office

Collect, process, analyse and disseminate statistics

- Why outsourcing
- What would you outsource
- IT is not just an add on it is integrated throughout the whole statistical business process

... for the Public Good

Better Data , better Lives

Can IT outsourcing work?

Possible

- You need to document every statistical process
 - It will be very costly
 - You require a very strong and mature PM organisation to deliver this
- ...but probably not
- Data is complex and official (privacy is key)
 - Public trust
 - IT is more than just the technology , it is Data Science, Automation, Analytical pipelines, IA and many other functions that heavily rely on IT
